You can remove multiple RPMs with similar file name by help of **rpm** command

Use the rpm's command **-e** (for remove) with the **--allmatches** option

```
"rpm -e --allmatches <package-to-be-removed>"
```

i.e.:

```
"rpm -e --allmatches kernel-2.4.25-8tr"
```

The **--allmatches** allows you to match all rpms with a given expression..
