```
[root@gateway ~]# vi allowweb.sh
```

Paste the below mentioned lines.

```
#!/bin/bash
cd /usr/local/squidGuard/db/whitelist/
echo -n "Plz enter the site name which you want to allow "
read -e web1
echo $web1 >> domains
echo "Enter another web name or press enter "
read -e web2
echo $web2 >> domains
echo "Enter another web name or press enter "
read -e web3
echo $web3 >> domains
echo Plz wait
/usr/local/bin/squidGuard -C domains
service squid restart
echo Web $web1, $web2 $web3 added into whitelist
```

```
[root@gateway~]# chmod u+x allowweb.sh
```

```
[root@gateway ~]# ./allowweb.sh
```

```
[root@gateway1 ~]# vi delweb.sh
```

Paste the below mentioned lines.

```
#!/bin/sh
cd /usr/local/squidGuard/db/whitelist/
echo "Enter the site name which you to delete"

read -e rep
for file in $(grep -il "$rep" domains)
do
sed -e "s/$rep//ig" $file > /tmp/tempfile.tmp
mv /tmp/tempfile.tmp $file
done

echo Plz wait...
/usr/local/bin/squidGuard -C domains
service squid restart
echo Web $rep deleted from whitelist
```
