

We have released a Hypervisor edition of the latest CENTOS 6.3 (x86_64) . This release has the following key packages:

- KVM Hypervisor
- SSH
- YUM

- Apache Web Server (with mod_ssl)

- PHP
- MySQL Server
- PostFix
- DoveCot
- SpamAssassin
- Webalizer

- Basic X Windows System (for just in case)
- SELinux

The installer will install only the KVM Hypervisor and SSH, if you do not opt to customize the installation during the installation. If you intend to select various additional packages, such as Apache, etc, then you need to select the customize option during package selection during the installation.

The single bootable/installable ISO file size is **545 MB** in size, and is downloadable from [this link](#)
